

Wireless Network Health Report

PASS-aligned RF health overview for DoorCheckr sensors, highlighting link quality, reliability, and offline devices across your buildings.

Observation window: Dec 1, 2025 – Dec 8, 2025 · Mode: Live Data

Devices Monitored 22 Sensors that reported during the window	Poor Signal Devices 0 Link quality below PASS comfort band	Avg Link Quality 197 Typical signal strength across all devices	Offline Devices (>4h) 2 Sensors that stopped reporting for 4+ hours
-----------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------

Interpretation: Green metrics indicate a stable, resilient RF environment. Amber or red metrics highlight devices and buildings that may need antenna placement review, channel changes, or infrastructure tuning.

Device-Level Wireless Health Metrics

Building	Device	Link Quality	Offline (hrs)	Reliability	Status
Field House Site-I	0xa4c13892cb9760c0 Last seen: 12/7/2025 4:03 PM	255	27.0	0.0%	Critical
